algPoS Runs on the Debian 11 Operating system

NPoS has a fully offline design all PoS Functions are done on the Local database that is kept in sync with the Server's as quickly as every minute to 60mins sync settings

The Following Add on can be supplied to you to custom your EPoS application to match your requirements

- Credit card processing\*
- Gift Cards (powered by our partner Reward-IT)
- Local Hosted Gift Cards (Powered by our own Gift card Module)

For more information on any features or to Arrange a Demo of ANY of the algPoS Software please contact us on (01604) 289431

#### **The Benefits of EPoS**

**with an EPoS system you gain a wider understanding of your business as well as better control of your stock and staff**

**an EPoS System offers you some of the following**

- Pricing control from a central location
- Accurate pricing at the Point of sale (no more keying or staff entering what value they like)
- No more time needed for staff to price each item up (as the shelf location would have the price)
- Price change is quicker as all you need to do is change the price and print the new Shelf edge label the till will automatically update
- Stock is better tracked by the EPoS system thanks to the database that powers the system
- Details Receipts help customers to fully understand what they have brought
- Easy change your receipt information (so you can give custom message for Christmas and new year etc)
- Fully print your store logo or band on the receipt
- **40** characters allowed for the item description (up to 20 more then what some cash registers and EPoS Systems allow)

Information within the flyer can changed without notice as the application is still under active development and support. For further information and demo of the systems please contact algPoS.
